

In the Specification:

Please replace the paragraph beginning on page 7, line 28, with the following rewritten paragraph:

For example, the range is represented by slant line of ~~"without application of voltage"~~ in the upper-side of Fig. 1 when dielectric anisotropy is negative. From the aspects of viewing angle characteristics and response characteristics, it is very important that deformation of the liquid crystal layer during driving is primarily the mode utilizing spray or bent.

Please replace the paragraph beginning on page 8, line , with the following rewritten paragraph:

For example, the range is represented by the slant line of ~~"with application of voltage"~~ in the lower-side of Fig. 1 when dielectric anisotropy is negative. The concentration of the photo-cured product of the photo-curing composition having the liquid crystal skeletal structure is preferably from 0.3 to 3 wt%, most preferably from 1.0 to 2.0 wt%.

Please replace the paragraph beginning on page 10, line 13, with the following rewritten paragraph:

Further, ~~when the voltage is applied~~preferably, there are the following two cases:
